SUMMARY

Software engineer with 3+ years across enterprise .NET development and test automation, now building and shipping AI-powered applications. Designed and deployed a multi-agent system on Azure using the Claude API, with structured prompting, enforced JSON output, and automated CI/CD. MS in Computer Science, 4.0 GPA.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, TypeScript, SQL, HTML, CSS

Frameworks: ASP.NET Core, ASP.NET MVC, Entity Framework Core, ADO.NET, LINQ, React.js, Angular.js, Node.js, Bootstrap

AI / LLM: Anthropic Claude API, multi-agent orchestration, prompt engineering, structured output & JSON schema enforcement, response evaluation, REST API integration

Cloud & DevOps: Azure App Service, Azure Application Settings, GitHub Actions CI/CD, Git, Linux

Databases: Microsoft SQL Server, MongoDB

Testing: Selenium, Postman, JIRA, MF ALM, Jenkins, regression & UAT testing

PROFESSIONAL EXPERIENCE

Software Engineer — U.S. Bank

May 2025 – Present

Houston, TX

- Design, develop, and enhance MVC-based enterprise applications in C# and the .NET Framework, with a focus on performance, scalability, and long-term maintainability.
- Build data access and persistence layers using Entity Framework Core and SQL Server, including schema design and query optimization for transactional workloads.
- Own smoke, functional, regression, and UAT testing for delivered features, identifying and resolving defects ahead of production deployment.
- Collaborate with cross-functional partners to translate business requirements into technical designs and delivery estimates.

Associate Professional Software Engineer — DXC Technology

Aug 2021 – Sep 2023

Bangalore, India

- Designed and executed manual and automated test plans and regression suites for web and mobile applications, building reusable Selenium scripts that expanded coverage and reduced release cycle time.
- Implemented JavaScript and TypeScript enhancements that improved application performance by 15%, and reduced production bug leaks through expanded unit testing and code coverage.
- Logged, tracked, and resolved defects in JIRA, partnering with developers and product owners to define acceptance criteria and refine test cases.
- Mentored 20+ team members on coding standards, debugging techniques, and QA best practices.

PROJECTS

HireRadar — AI Job Search Platform (solo build, live on Azure)

2025

C# · ASP.NET Core · Claude API · SQL Server · Azure App Service · GitHub Actions

- Built and deployed a full-stack platform orchestrating three specialized Claude agents — a research agent, a message-writing agent, and a scoring agent — each with its own system prompt, output constraints, and JSON response parsing.
- Engineered structured prompts and schema enforcement to keep LLM output consistent enough to build application logic on, including handling for malformed and off-spec responses.
- Integrated the JSearch API for real-time job aggregation, and configured a GitHub Actions pipeline that builds, publishes, and deploys to Azure App Service on every push to main, live in under three minutes with no manual steps.
- Implemented a Kanban-style application tracker with five pipeline stages, backed by SQL Server and Entity Framework Core, with a confirmation flow so only verified applications are tracked.

EDUCATION

M.S., Computer Science — Kent State University

Kent, OH · 2025

GPA: 4.0/4.0 · Coursework: Machine Learning, Big Data Analytics, Data Mining, Advanced Database Systems.

B.Tech., Electronics and Communication Engineering — SRM University

Andhra Pradesh, India · 2021

GPA: 4.0/4.0 · Coursework: Python, Data Structures and Algorithms, Operating Systems, Statistics.
